safety above all else

# Topfix roof edge protection

Our topfix edge protection system is specifically designed to be fixed directly to the top of a parapet wall or copings. This system is ideal for areas where the existing parapet wall is not high enough to provide adequate fall protection, or to open shafts, stairwells, or loading bays

Supplied in a modular kit form the topfix system is quick and easy to install with no on-site welding or bending required. The number of components is kept to a minimum making specification, ordering and installation as quick and simple as possible. As with the parapet and freestanding systems the height of the top and mid rails are adjustable using the sliding top riser.

Our topfix system complies to the following legislation:

- BS EN 13374: 2004 Class A
- HSE INDG 284 "Working on roofs"
- HSG33 "Health and safety at work"
- BS6399: Part 2 1995 Wind code

This product is available powder coated to any RAL colour!

## KEY COMPONENTS

### MAIN UPRIGHT

- Fully height adjustable
- Removable top riser unit
- Stainless steel grub screws and clinch nuts for extra durability
- Fully galvanised
- Available powder coated to any RAL colour

### CROSS RAILS

- Pre-galvanised steel tube
- Pre-cut to 2.50m lengths
- Lightweight

## SIMPLE

System uses minimum number of components for easy installation

## DURABLE

Pre-galvanised tube and stainless steel fittings

## VERSATILE

Pre-assembled components allow quick and easy installation
